Conference title:
PROSYS Research Seminar 2018

Conference scope:
National

Conference date:
26.10.2018

Conference place:
Department of Chemical and Biochemical Engineering, Technical University of
Denmark

Title of poster:
Gradients of pressure in anaerobic digesters

Authors:
Vicente Monje, Helena Junicke, Xavier Flores-Alsina, Krist V. Gernaey

Abstract:
Anaerobic digestion is a state-of-the-art technology for organic carbon removal from waste water. Among other advantages are the high loading capacity, low sludge production, and biogas generation. Compact bioreactor designs are used to reduce the needs of surface. The bioreactors are tall cylinders up to 30 meters high. The column of water produces differences in hydrostatic pressure along the height of the bioreactor. Here we model the effect of pressure on (i) gas solubility along the reactor, (ii) reaction thermodynamics, and (iii) gas-liquid mass transfer.
